

Dr Keith Scott, GP

If you've had a cough for three weeks or more, your GP wants to see you.

If you've had a cough for a while and it won't go away, don't ignore it. It might be nothing to worry about but it could be a sign of lung cancer. Cancer's more treatable when we find it early, so it's important to get checked. And the earlier the better. Listen to your body.
